

ImPACT™

PLAY IT SAFE –

**Concussion Assessments
Save Lives**

The experts at the Marianjoy Post Concussive Institute assist parents and coaches in providing a 20 minute baseline and post-concussive assessment to children and student athletes using ImPACT™ Testing.

For more information or to schedule an appointment, call **630-909-8608**.

**An estimated
300,000
sports-related
concussions
occur each year.**

Brain concussions can result from a serious fall or blow to the head. Most concussions do not involve loss of consciousness and do not show up on MRI or CT Scans. All concussions need to be monitored and managed, to give the brain ample time to heal. Following a head injury, consult a healthcare professional if a student athlete is experiencing any of the following symptoms:

- Headaches
- Fatigue and tiredness
- Poor memory or Forgetfulness
- Irritability and anxiousness
- Dizziness and poor balance
- Difficulty concentrating
- Nausea or vomiting
- Double or blurred vision
- Delayed mental speed in processing information
- Poor self-esteem
- Increased sensitivity to noise and light
- Difficulty falling or staying asleep
- Neck and back pain
- Depressed or sadness
